Logic & Calculation Document

LabWise LIMS

8 April 2026

Stats Strip (Top Bar)

STPs Created Today

Count of AuditLog entries where userId = this user, entity = TestMaster, action = create, createdAt = today.

Analytes Added Today

Count of AuditLog entries where userId = this user, entity = TestParameter, action = create, createdAt = today.

Total Active STPs

System-wide count of TestMaster records where isActive = true.

Incomplete STPs

Count of TestMaster where isActive = true AND (specification is null/empty OR method is null/empty).

Data Completeness

Percentage of active TestMasters with all required fields filled (name, code, method, unit, departmentId). Formula: $\text{complete} / \text{total} \times 100$.

Unique approach: Activity tracked via AuditLog since master tables have no createdBy field.

KPIs (5 Metrics)

KPI	Target	What It Measures	Source
STPs Created / Month	50	Volume of new test masters this month	AuditLog (entity=TestMaster, action=create)
Analytes Added / Month	100	Volume of new parameters this month	AuditLog (entity=TestParameter, action=create)
Methods Updated / Month	30	Test masters updated this month	AuditLog (entity=TestMaster, action=update)
Pending STPs	0 (inverse)	Incomplete test masters	TestMaster (missing spec or method)
Data Completeness	100%	Fields completeness across all tests	TestMaster field checks

Data Source: AuditLog

Since master tables (TestMaster, TestParameter, etc.) do not have createdBy fields, all user-scoped metrics are derived from the AuditLog table which records every create/update/delete action with the userId.

KRAs (4 Weighted Areas)

KRA	Target	Weight	Calculation
Data Quality	98%	35%	% of tests with spec + method + min/max limits filled
STP Throughput	100%	25%	STPs created this month / 50 target x 100
Standards Compliance	100%	20%	% of tests linked to a valid standardId
Turnaround	95%	20%	Placeholder (95%) -- needs SLA tracking

Overall KRA Formula

(Data Quality Score x 0.35) + (Throughput Score x 0.25) +
(Standards Score x 0.20) + (Turnaround Score x 0.20)

Each score = min(100, (actual / target) x 100)

Alerts (4 Types)

Alert	Trigger	Severity
Incomplete STPs	TestMaster missing specification or method	Amber
No Parameters	TestMaster with zero TestParameter records	Amber
No Standard	TestMaster with standardId = null	Red
Not NABL Accredited	TestMaster with isAccredited = false	Amber

Data Quality Breakdown

Shows per-field completeness across all active TestMaster records. Fields checked:

Field	What It Checks
Name	Not null and not empty
Code	Not null and not empty
Method	Not null and not empty
Unit	Not null and not empty
Department	departmentId not null
Specification	Not null and not empty
Standard	standardId not null
Min Limit	minLimit not null
Max Limit	maxLimit not null

Auto-Refresh Schedule

Data	Refresh	Stale Time
Stats, Activity, Alerts	60 seconds	30s
KPIs, KRAs, Quality	5 minutes	60s

Data Sources

What	Table
User activity tracking	AuditLog
Test definitions, completeness	TestMaster
Test parameters	TestParameter
Standards	Standard
Products	ProductType

Pending Items

Item	Current	Planned
DMS/Method Upload	No file upload model	Create Document model with file storage
Turnaround KRA	Hardcoded at 95%	Track actual SLA from request to completion
NABL Integration	Read-only flag on TestMaster	Full accreditation workflow
Specification Routes	Models exist, no API	Implement /api/specifications CRUD
